

Application to Appropriate Water.

STATE OF UTAH.

Provo, Utah, Feb 20, 1907

For the purpose of acquiring the right to use a portion of the unappropriated water of the State of Utah, application is hereby made to the State Engineer, based upon the following showing of facts, submitted in accordance with the requirements of Chapter 108 of the Session Laws of Utah, 1905.

The purpose for which the Water is to be Appropriated is Power.

NOTE—If it is intended to use the water for some purpose other than Irrigation, Power or Mining fill as many of the first fifteen blanks as are applicable and then state the purpose for which it is to be used under the heading "Miscellaneous Purposes."

1. The name of the applicant is Provo Pressed Brick Co.
2. The postoffice address of the applicant is Provo City, Utah
3. The flow of water to be used in cubic feet per second is 100
- 3a. The quantity of water to be appropriated is (See note under explanatory) _____ acre feet
4. The water is to be used each year from January first to December last both MONTH DAY inclusive
5. The water is diverted from Utah Lake on Provo River Utah County
Name river system or drainage area.
6. The particular point at which the water is to be diverted is described as follows:

(NOTE—If on a fork, branch, tributary or a feeder of said stream or source or an isolated spring in its drainage area name same, and give course and distance of "point of diversion" or "point of issuance" of spring to some U. S. land corner if within six miles of one, if not, to some prominent and permanent natural object.)

A point on left bank of Provo River which is N. 40° 05' W. 3021.5 feet
from the S.E. corner of Section 25 in T. 6 S., R. 2 E., Salt Lake Meridian.

7. The diverting works will consist of 4 foot gates, 3 in. number placed side
by side, and a diverting channel and tail race.

8. The cross section of the diverting channel will be gates canal or U or Q.
Strike out ones not needed.
9. The nature of the diverting channel will be: earthen, wooden, ~~iron~~ or concrete. culvert under R.R.
Strike out ones not needed.
10. The length of the diverting channel will be 4591 tailrace 1339 feet.
11. The top width of the diverting channel will be (if a flume or ditch) 10 tailrace 7 feet;
12
12. The bottom width of the diverting channel will be (if a flume or ditch) 12 tailrace 6 feet;
tailrace 2.5 ft.
13. The depth of water in the diverting channel will be (if a flume or ditch) about 2 feet.
14. The diameter of the diverting channel will be (if a pipe) _____ feet.
15. The grade of the diverting channel will be about 29 tailrace 10 feet per mile.
16. The number of wheels employed in the development of power will be Two
17. The size of the wheels will be #23 inches.
18. The make of the wheels will be Samsons Improved Upright Turbines
19. The wheels will operate under a head of 18 ----- feet.
20. A total of 173 about horse power will be produced.
21. The power thus produced will be used for electric lighting and propelling machinery at Provo and other points in Utah.

22. After having passed through said wheels, the water will be returned to the natural stream or source at a point described as follows: (See note under 6.) on left bank of Provo River at point
which is N. 51° 06' W. 10.68 chains 704.88 feet from the center of Section
30 in T. 6 S., R. 2 E., Salt Lake Base and Meridian.

MISCELLANEOUS PURPOSES.

EXPLANATORY.

(Never use the blank 3a except when it is intended to store the water to be appropriated. In such cases the total quantity of water to be so stored should be given in acre feet. The legal subdivisions of land covered by the reservoir should be named, and the periods of time during which the water is to be stored and released should be given in the space below. If the water is released from the reservoir into the natural channel of a stream the point where it is diverted from such stream should be described in blank No. 6, and the data given in blanks 7-15 inclusive should be relative to the works used to divert the water from the natural channel. All other works should be described under "Explanatory" except where the water is not stored in the natural channel of the stream supplying it. In such cases the "point of diversion" is the place where the water is taken from the supplying source and should be described in blank No. 6 and blanks 7 to 15 inclusive should be used to describe the diverting works.)

The following additional facts are set forth in order to more clearly define the full purpose of the proposed application:

The object of this application is to provide a source of supply which will conserve some of the water by shortening the channel, and by putting all of the water now running in the three channels viz; Factory Race; City Race, and Tanner's Race, into one. Also to supply water during some of the winter months when much ice and flooding prevent its use now. And also to increase the power by the use of water now running in the City and Tanner Races. The water used will be diverted at the above described point, and carried to the present penstock of the Provo Pressed Brick Company where it will be used for the development of power at a point which is N.61°35' E. 28.53 chains 1883.0 feet from center of Section 36 in T. 6 S., R/2 E., S.L.B. and M. immediately south of penstock will be placed gates and rating flume for the diversion and control of the water. The Factory Race water being taken at this point. The water going to the City and Tanner Races will be carried in a tailrace in S.W. direction to confluence with the City Race where gates and rating flume will be placed for the division of the City and Tanner water. This point is N.60°30' E. 12.25 chains 808.5 feet from the center of said Section 36. From this point the water belonging to the Tanner Race will be carried a distance of 240 feet to the above described point of return (See No. 6). The tailrace will be large enough to carry all of the diverted water if it should be necessary at any time.
